PROFESSIONAL SUMMARY

Driven Computing undergraduate with hands-on experience in cloud infrastructure, CI/CD automation using GitHub Actions, and scripting with Python and Bash. Skilled in Linux, SQL, and AWS deployments. Eager to support Cambio's DevOps team by automating routine tasks, maintaining delivery pipelines, and enhancing core healthcare software systems.

TECHNICAL SKILLS

- **Languages:** Java, Python, JavaScript, SQL
- **Backend:** Spring Boot, REST APIs, Microservices Architecture
- **Cloud & DevOps:** AWS (EC2, ALB, S3, CloudFront, CloudWatch, RDS), GitHub Actions (CI/CD), Docker
- **Databases:** PostgreSQL
- **Frontend:** React, HTML5, CSS3, JavaScript
- **AI/ML Tooling:** LangChain, Ollama, RAG Pipelines

PROJECTS

1. SmartPresence — Automated Attendance System | GitHub Repository Group project(2026)

- Built the backend with **Java 21 and Spring Boot**, handling **100+** concurrent proximity check-ins per session with an average response time under **200 ms**.
- Deployed and managed cloud infrastructure on **AWS (EC2, ALB, S3, CloudFront, CloudWatch, RDS)**, achieving **99.9%** up time over **8** weeks of continuous testing.
- Set up a **GitHub Actions** CI/CD pipeline that cut deployment time from **20 minutes to under 3 minutes** and eliminated manual server configuration overhead.
- Modeled attendance data in **PostgreSQL 16**, using ACID transactions and constraints to prevent duplicate check-ins across **100+** simultaneous users in testing.

2. URL Shortener | GitHub Repository Individual project(2026)

- **Backend API (Python / Java):** Built fast REST endpoints to handle link creation and quick redirects without slowing down the server during heavy traffic.
- **Base62 Encoding:** Used Base62 encoding to convert long links into short 7-character aliases, preventing duplicate links and making sure users always reach the correct page.
- **PostgreSQL Database:** Set up database tables with indexes on link keys and click counters, fixing slow search queries and keeping analytics data accurate.
- Docker Setup: Packaged the application and its database using Docker and Docker Compose, fixing environment setup issues and allowing the project to run anywhere with a single command.

3. Multi-PDF AI Chatbot | GitHub Repository Individual project(2025)

- Integrated **LangChain** with locally hosted **Ollama** models to run semantic search across **20+** PDF documents (**250+** pages total) with zero external API costs.
- Built an interactive **Streamlit** interface in **Python**, reducing manual document lookup time to accurate semantic answers in under **3 seconds** per query.

EDUCATION

BSc in Computing and Information Systems

Sabaragamuwa University of Sri Lanka *Expected 2028*

CERTIFICATIONS

- **AWS Educate Introduction to Cloud 101** — Amazon Web Services (Feb 2026)
- **Google AI Essentials Specialization** — Google / Coursera (Oct 2025)
- **Foundations of Project Management** — Google / Coursera (Oct 2025)
- **Foundations: Data, Data, Everywhere** — Google / Coursera (Sep 2025)

EXTRACURRICULAR ACTIVITIES

- **IEEE Student Branch:** Active IEEE Student Member; participant in university and national-level IEEE technical hackathons, workshops, and coding competitions.
- **Society of Computer Sciences (SUSL):** Active member participating in technical workshops, peer programming sessions, and university technology events.
- **Academic Hackathons & Leadership:** Engaged in collaborative software challenges and technical events, demonstrating leadership, teamwork, and problem-solving skills.
